

Using the enclosed table, compare the body growth experienced by two little sisters during a 1-year period:

1. The older sister weighed 14 Kg at 21 months and 16.5 Kg at 33 months; during the same period her height increased from 91 cm to 100 cm.
2. The younger sister's weight increased from 7 Kg at 3 months to 11 Kg at 15 months, while her height increased from 65 to 84 cm.
