

Test grades of Natural Computing

Instructor: Dr Giuditta Franco

January the 8th 2018

On the same row of every student (code) the grade for each of the eight exercises is reported, beside the final grade (in the last column). A bonus of two points was given, due to common difficulties encountered on the first exercise (although it was an homework assigned in class). Solution of the test has been already published on the course webpage.

Majority of the students passed the test, with a grade which may be incremented by a valuable homework (project), to be assigned. An extended office hour is scheduled on Wed 10th Jan, at 2:30pm - 5:30pm. Votes superior to 18 may be officially registered on Feb 7th 2018, alternatively to regular oral exams.
