STUDYING LANGUAGE ACQUISITION IN TYPICAL AND AT-RISK POPULATIONS: METHODOLOGICAL ISSUES

Irene Lorenzini, Ph.D.

Laboratoire de Psychologie de la Perception, Université Paris Descartes

May 16, 2019 2:00 to 4:00 pm **Current methodologies in developmental
speech & language studies**

Irene Lorenzini is a Post-doc Researcher at the Integrated Neuroscience and Cognition Center, Equipe « Langage et Cognition ». She is interested in speech & language as situated phenomena, co-existing and interacting with other neurobiological abilities (or disabilities). She is currently investigating in these fields: a) the relationship between sensorimotor development and speech perception in typical and atypical populations of children and infants; b) the relationship between central cognitive capacities and sensory processes in speech perception.
